

## QA Engineer

### About Nimbltech

At Nimbltech we are committed to unifying and enhancing sustainability and customer satisfaction for the Water Utilities. Our mission is to optimize the operations of water utilities, by creating easy-to-use and innovative technology solutions that enhance their sustainability and elevate customer satisfaction.

If you wish to work as a full-time, long term contractor QA Engineer and to be part of a company with a culture that rewards ownership and loyalty, commit to customer satisfaction, encourages initiative and cultivates self-improvement, we look forward to meeting you.

You'll have the challenge to contribute to both manual and automated testing efforts, with a clear growth path towards owning and shaping our entire testing strategy. We encourage the use of AI tools to enhance efficiency and effectiveness in all aspects of our work.

### Responsibilities

- Collaborate with cross-functional teams to align on project goals and quality expectations
- Execute manual and automated testing to validate functionality and performance
- Take ownership of the release sign-off process to ensure production readiness
- Drive continuous improvement and innovation in QA practices, leading company's QA strategy.
- Research and implement emerging testing technologies, including AI-powered solutions for test case generation, defect prediction, and result analysis.
- Write products' operational & functional manuals.

### Skills & Experience

#### Must have

- Bachelor's degree in Computer Science, Engineering, or a related field (or equivalent practical experience).
- 1–3 years of professional experience in Quality Assurance for web applications, or relevant internship/co-op experience.
- Experience in designing and executing manual and automated test cases, with a solid understanding of testing fundamentals and tools such as Selenium, Cypress, or Playwright.
- Basic scripting skills in languages like JavaScript or Python, with eagerness to improve automation skills.
- Good understanding of web technologies (HTML, CSS, JavaScript, TypeScript).
- Being proactive with strong analytical and problem-solving abilities

#### Nice to Have

- Experience with CI/CD pipelines or interest in learning about automated deployments.
- Familiarity with Agile development methodologies and workflows.
- Exposure to performance or security testing concepts.
